Alberta Safety Council

Alberta's 1960 death toll had reached 126 by the end of June. The total was 24 percent above that for the first half of last year.

In announcing this recently, Alberta Safety Council Manager Paul Lawrence expressed grave concern. In June alone, he said, 39 persons were killed. This one month toll has been equalled once and exceeded only twice, July 1958 saw 44 deaths and October 1959, 41. There were 24 deaths in June 1956.

Thirty-five of the deaths in June were reported by the RCMP. Thus most of them were the result of accidents on the open highway, Mr. Lawrence said. He urged holiday motorists to remember to:

1. Keep your eye on cars ahead and behind. Don't follow closer than a car length for each 10 MPH of your speed.

2. Never violate a "no passing" line. When you want to pass take into account the possibility that the car approaching may be speeding and will reach your position before you can get back to your own side of the road.

3. Reduce speed on gravel roads and at night.

4. Be extra careful whenever visibility is poor: in rainstorms, on dusty roads and at dusk.

5. Don't fight fatigue. Give in and take a rest.

Injuries and accidents declined during June with 543 injuries against 625 last year. There were 1697 accidents contrasted with 1822 in 1959.

The injury total for the first 6 months of the year was 2409, down 12%. The accident total was 11 352, up 2%.

With injuries down and accidents almost the same the Safety Council is unable to explain the steep increase in deaths. Mr Lawrence said that chance plays a part in determining whether an accident will result in fatalities or not. "We have seen many accidents which caused tremendous damage to the vehicles but left the occupants almost unhurt. On the other hand, many seemingly trivial accidents result in death. The obvious conclusion is that any traffic accident may cause injuries from which the victims do not recover."

Actually Safety Council records show that the death toll for the first half of the year is in keeping with that of the previous five years.

From 1955 to 1959 inclusive there were 3 9 accidents per injury, while the last 6 months shows 4.3 accidents per injury.

The death record is even closer to the five year average, which was 83 accidents per death. The past six months showed 82 accidents per death.

"There are two ways to cut deaths and serious injury," said Mr. Lawrence. "The obvious one is to have less accidents, but a more immediately attainable way is by the use of seat belts. Authoritative studies have shown that seat belts will prevent death in about half of the potentially fatal accidents."

Wedding Bells

Pasychuyk—Morrison

Baskets of pink and white peonies banked the altar of Grace Evangelical Lutheran Church of Drumheller, Saturday July 9, when Doris Frances Morrison exchanged vows with Martin Michael Pasychuyk. Rev. Putt, of Calgary, officiated at the double ring ceremony uniting in marriage the daughter of Mrs. B. Mammel of Delia, and the son of Mr. and Mrs J. Pasychuyk, of Buchanan, Sask.

Given in marriage by her step-father, the bride was lovely in a floor length gown of white silk organza over taffeta. The fitted bodice had a wide shaped neckline outlined with sequin and long lily point sleeves. A bouffant skirt completed the gown. Her chapel veil misted from a sequin trimmed cap, and she carried red roses and stephanotis. She wore a pearl drop necklace, a gift of the groom.

Bridal attendants Miss Myrtle Mensch, Miss Donna Wallace, and Miss Marge Morrison wore matching bouffant cocktail length gowns of paste blue silk organza, complimented with white feather bandeaus and white accessories. They carried pink carnations.

Mr. Fred Bulechowsky, of Calgary, was best man, while the ushers were Ralph Morrison, brother of the bride; and Vernon Brown, uncle of the bride.

Mrs. Irene Morton sang—"Lord Who at Cana's Wedding Feast," during the signing of the register.

For her daughter's wedding Mrs. Mammel chose a dress of lace over satin in a shade of blue. Her corsage was of pink roses, and her accessories were of pink also.

A reception was held in the Delia Community Hall, where the toast to the bride was proposed by Rev. Putt.

Following a wedding dance the bride donned a suit of desert tan wool with beige and white accessories, and a corsage of yellow roses for a wedding trip to Jasper, Banff, and points in the U.S.A.

Out of town guests included Mr. and Mrs. Brother, Mr. Pasychnyk, of Warman, Sask.; Mr. and Mrs. T. Cragg, Arbourfield, Sask; Mrs. P. Litzenburger, Mr. and Mrs. G Ferworn, Mr. and Mrs. N Jensen, Mr. and Mrs. H. Raush and Calgary; Mr. and Mrs Bulechowsky, Mr. and Mrs W. Bulechowsky, Mr. and Mrs. F. Ludwig, and Mr. E. Gogstetter, Rosedale; Mr. A Semaks, Drumheller.

Mr. and Mrs. Pasychnyk will make their home in Delia, where both the bride and groom are on the staff of the Delia School.

Moose Jaw Sask., got its name from an Indian phrase meaning, "where white men needed canoes with jaw bone of moose."

Duck Hunting Season

Extended in Southern Alberta

Southern Alberta duck hunters will have two weeks more hunting this season, but they will find their bag limit still restricted, particularly on redheads and canvasbacks.

The migratory bird regulations for Alberta announced by the Canadian Wildlife Service extend the season in southern and central Alberta two weeks. The extended season, which runs from Sept. 14 to Dec. 14, is intended to help drive ducks out of the Province and avoid the issue of special duck damage permits. In northern Alberta the season is Sept. 1 to Nov 30 h.

Bag limits remain the same as last year, except that the same limits are provided for rails, coots and gallinules as for ducks. These limits do not apply to Metis, Indians and others living by hunting and trapping who may shoot 25 rails, coots and gallinules a day. Special protection is given the scarce canvasback and redhead ducks by allowing no more than one of either kind to be included in a day's bag or in possession.

For geese and Wilson's snipe, the limits remain the same as last year. The daily bag permitted of geese is 5, and 10 may be in possession; limits on snipe are 8 and 16.

A change in the regulations restricts the issue of duck damage permits to owners, managers or lessees of land or persons authorized by them who are residents of Alberta.

Searle Precipitation Report

No. 14

Compiled from the records of Government and Searle Rain Gauges. Records up to and including August 9th, 1960.

During the past week quite general precipitation across Western Canada averaged about an inch in both Alberta and Manitoba, and slightly more in the province of Saskatchewan. In many districts, however, rainfall measured between one and three inches.

These very timely rains substantially improved the moisture situation, supplying much needed moisture which halted deterioration and ensured the proper filling of all cereal crops that were not too far advanced to benefit.

Growing season rains from April 1st to August 9th, by provinces, with last year's figures in brackets, are as follows: Alberta 84 per cent (85%) of normal; Saskatchewan, 93 per cent (75%) of normal; and Manitoba, 81 per cent (85%) of normal, giving a weighted average for the three prairie provinces of 90 per cent (78%) of normal.

The total overall moisture condition of the three prairie provinces, which takes into account the moisture that accumulated in 1959, now stands at 100 per cent of normal, compared with 98 per cent last week and 77 per cent at this time a year ago. Respective figures for the three provinces are as follows: Alberta 94 per cent of normal; Saskatchewan, 100 per cent of normal; and Manitoba, 110 per cent of normal.

Many districts now report that no additional moisture is required to bring 1960 crops to maturity.

When Marconi received in Newfoundland in 1901 a radio signal broadcast from England it disproved the experts' theory that radio waves could not get around the curvature of the earth.

Hold Your Horses! Don't Harvest Too Soon

At this time of year, many farmers become afflicted with the disease which, for want of a better name, has been called "harvest fever". The main symptom of this disease is over-anxiety—the urge "to get that combine rolling". Hold your horses! Don't "beat the gun" and start harvesting before your grain is completely ripe, or dry enough.

Prevent Losses.—Wheat and barley should not be harvested until the kernels are plump and well matured. "Grass green kernels in wheat" and "immature kernels in barley" are serious and costly degrading factors. It is a well established fact that by harvesting your grain before it is completely ripe you not only sacrifice yield, but gain no advantage whatsoever as far as quality (grade) is concerned.

Shattering is another problem too. Premature cutting is one of the main reasons for spoilage of grain in storage. In a recent interview survey, 144 experienced elevator operators in Kansas ranked premature cutting as the No. 1 cause of distribution of wheat in storage. They considered that starting to harvest too soon is a more important reason for the spoilage of wheat in storage than the occurrence of damp weather during harvest.

Higher Grade for Quality.—The main factors responsible for reducing the quality crops, and hence their market value, are as follows: (1) Harvesting too soon. Grain crops, particularly wheat and barley, should not be harvested until the kernels are well matured. (2) Faulty swathing. Grain swaths should be properly laid on the stubble so that the heads are not likely to come in contact with the ground, and become damp and discolored. (3) Faulty adjustment of combine. Remember that proper cylinder speed and concave settings are by far the most important adjustments on the combine. (4) Rough handling of grain. Poorly ventilated grain augers, and their careless operation, can be the cause of serious damage to threshed grain. (5) Poor storage conditions. Cleanliness is the key to the safe storage of grain.

Don't lose dollars! You will be well paid for any extra care you exercise in cutting, threshing, handling and storing the grain you harvest in 1960.

Alta. Hail Claims Soar

More than 2,000 claims for crop damage by hail had resulted from storms in Alberta up to last week this year. In the same period last year only 191 claims had been received by the Alberta Hail Insurance Board.

Storms in the third week of July resulted in more than 1,200 claims, skyrocketing the total for the year from 800 to over 2,000. Glen Elder, managing director of the board, had just estimated total claims for the year would go over the 2,000 mark when the new storms hit.

He now feels claims could go over 3,000 and might possibly total 4 000. No estimate can be made of the value of each claim until agents assess the damage, but in 1959 claims had an average value of $400.

Highest number of claims up to this year was in 1953 when 2,300 were recorded.

Massey-Ferguson Limited

MORE HORSEPOWER— LESS MANPOWER... THE KEY TO MORE PROFITABLE FARMING

The basic principle of sound farming economy is getting the maximum amount of work done at the lowest possible cost. The only way this can be accomplished is with modern farm machinery.

Modern farm machinery is designed to do more work in less time at lower cost. More horsepower per man allows you to reap full benefits from today's more productive farming methods by keeping labour costs in line. It also assures you of a reliable work force you can swing into action at a moment's notice. Critical farm operations get done without delay and without depending on the availability of high cost farm labour. Whatever kind of farming you do you can look to Massey-Ferguson for the machines and implements that will do every job faster, more efficiently, and more economically.

See your Massey-Ferguson dealer.

Final payment on rapeseed

A final payment of 25½ cents a bushel will be paid out to farmers on rapeseed delivered to the 1959-60 pool operated by the Saskatchewan Wheat Pool, it was announced recently by J. H. Wesson, president. The final payment will bring the full price for the top grade of rapeseed up to $2.56 per bushel or 4.11 per pound. The total amount to be paid out will be about $250,000.

The decision to announce the payment at this time was made by the Wheat Pool board after reviewing the experience of the first year's pooling operations, Mr. Wesson said. The Wheat Pool had received about 782,000 bushels on a pooling basis and expected to receive about 1,000,000 bushels before the end of the crop year. Any small surplus left at July 31 will be transferred to the 1960-61 pool at current export prices.

About 85 percent of the rapeseed delivered to the pool was graded as the top grade "Canada rapeseed". The final payment on other grades were also announced by the pool. They will be: 2 Canada rapeseed, 25½ cents bringing the final price to $1.97½ per bushel for the season; 3 Canada rapeseed, 44½ cents bringing the final price to $1.56½ per bushel and sample rapeseed will qualify for a final payment of 62½ cents to make the total price $1.62½ per bushel for the season.

Beginning as soon as Wheat Pool agents can be notified, rapeseed delivered to the pool will be paid for on the basis of the final prices. Cheques for the final payment covering rapeseed already delivered will be mailed directly to growers from the Wheat Pool head office.

The Wheat Pool board of directors commended W. J. Ball, manager of the rapeseed pool, and his staff for results achieved during the first year's experience in rapeseed pooling. The Pool board decided some time ago to organize a pool in 1960-61 for the 1960 crop.

Pedestrian scarer

The motorist who relies upon a sudden loud blast of the car horn may clear the road of pedestrians but he may also cause the person to become panicky, especially if he is old or lame. If the pedestrian is to obey the traffic signal he should not have to run for his life from a turning motorist at the crossing. He is entitled to have his car under control at all times and he realizes that the lives of his loved and dear children are in the hands that hold the wheel. The few minutes spared to give a pedestrian a safe passage may save the driver from an unhappy memory and a costly accident.

Tree planting car on 41st tour

Donated by the Canadian Pacific Railway, serviced and moved over both Canadian National and Canadian Pacific through the courtesy of the Railways, and supported by voluntary donations, the Association's "Travelling classroom" has carried inspiration and instruction to the people of the West during the past 40 consecutive years. In this period it has travelled over 125,000 miles, and played host to one million three hundred and fifty thousand people.

Tree planting is an essential element in the stabilization of agriculture in Western Canada. Successful tree plantings provide protection for people, crops, soil, and livestock, and also make the prairies a better place to live. As shelter belts around the prairie farm home, they make possible, by the protection they afford, successful gardens and supplies of small fruit, thus helping to keep the home table supplied. They add a new pleasure to home life and the comforts of living. As field shelters, although they do not obviate the need for proper cropping and soil management practices, they can be so integrated with them that these practices are made more effective.

Meetings are held in the Car at each point on the itinerary, at eight o'clock in the evening. Public schools are open, arrangements are made with the school authorities to have the Pupils visit the car during school hours. Sound films show the results obtained by farming people through planting trees, and give practical instruction in tree planting and home beautification. An illustrated talk covers planting methods, which trees to plant, the laying out of a shelter belt, and planning the home ground, with information on the care of trees and shrubs. A question period follows each evening meeting.

Two-skirt outfit

PRINTED PATTERN

Choose the skirt that flatters you best—sun or softly flared. Easy-sew overblouse is cool, smart and creates a narrow, long-waisted effect.

Printed Pattern 4984: Half Sizes 12½, 14½, 16½, 18½, 20½, 22½, 24½. Size 16½ (with slim skirt) 3¾ yards 35-inch fabric.

Printed directions on each pattern part. Easier, accurate.

Send fifty cents (50c) in coins (stamps cannot be accepted) for this pattern. Please print plainly Size, Name, Address, Style Number. Send order to:

Anne Adams Pattern Dept.,
Department F.I.,
60 Front Street, W. Toronto

REMOVES PAINT

Ordinary nail polish remover can be used to take off splatter of paint from floors—even when it has hardened. Let the remover sink in for a few minutes only, then rub off with a cloth and wash the spot with warm, soapy water.

TVO

John Jurens, a Toronto life detector operator, has revealed that many business firms have given their employees lie detector tests to check their honesty. Courts do not accept such evidence and no police department uses the machines.

Radar clocks speeders

Radar - equipped RCMP cars, working on an experimental basis of 2½ hours per day, recorded 146 speeding violations on highway approaches to Winnipeg during a 14-day period.

At the same time, regular patrol cars operating the same area picked up 42 speeders, making a total of 182 in the two-week period. During the same period in June of 1959, patrol cars stopped 56 violators on highway approaches to the metropolitan area.

Hon. Sterling Lyon, Q.C., attorney-general, said this pointed up the effectiveness of radar in curbing speeding, and reminded motorists that beginning July 1 speeding violators would be liable to prosecution.

During June, which was set aside as "education month" with the introduction of radar, warning tickets were only issued.

He said that road signs have been installed on the Trans-Canada highway and on provincial trunk highways 3, 4, 6, 8, 9, 16, 12, 15, 59 and 75 warning motorists that these highways are "Speed Checked By Radar."

He said the radar equipment and the posted highways should make drivers "more aware of the need to keep within safe speed limits."

Mr. Lyon emphasized that the equipment would not be used to "trap" speeders; its primary function would be to enforce safe driving laws by deterring speeding violations.

During June, the radar equipment was used during hours of high traffic volume each day. RCMP officers noted a decline in "week-end speeders".

One in 20 Manitobans premium-exempt

Over 43,000 residents—or about one in every 20 Manitobans—are exempt from paying Manitoba Hospital Services Plan premiums, Hon. George Johnson, health minister, has reported.

These persons, exempted by legislation, fall into two categories.

1. Those who receive financial assistance from the province, such as recipients of mother's allowance, social assistance, old age assistance (age 65 to 69), disabled person's allowance, blind person's allowance and wards of the province. There are about 22,000 persons in this category.

2. Any resident, 70 years of age and over, who on investigation is found to be financially unable to pay MHSP premiums. These investigations are carried out by the Old Age Assistance board, 221 Osborne Street, on application of any person 70 years of age and over. There are 21,000 persons exempt under this category.

GEMS OF THOUGHT
HOME

Home is the place where, when you have to go there, they have to let you in. —Robert Frost

He is the happiest, be he king or peasant, who finds peace in his home. —Goethe

Only that traveling is good which reveals to me the value of home and enables me to enjoy it better. —Henry David Thoreau

Home is the dearest spot on earth, and it should be the centre, through out the boundary, of its affections. —Mary Baker Eddy

This is the true nature of home —it is the place of peace.
—John Ruskin

It's when you're safe at home that you wish you were having an adventure. When you're having an adventure you wish you were safe at home. —Thorton Wilder wrote

Sask. sells bond issue in Switzerland

Hon. C. M. Finer, Saskatchewan provincial treasurer, announced the sale of a 40 million Swiss francs loan in Switzerland. This amount is equivalent to approximately $9,100,000 in Canadian currency.

The bonds mature in 15 years, bear a coupon of 4½ percent, and are being offered to the public at par. The bonds are payable in Swiss francs only.

The proceeds will be advanced to the Saskatchewan Power Corporation, which, to date, has purchased generating equipment in Switzerland.

The issue was underwritten by a syndicate headed by The Swiss Bank Corporation, The Swiss Credit Bank, and The Union Bank of Switzerland and was arranged through the Canadian firm of Dawson Hanbury and Limited.

This is the first Canadian provincial loan issued on the Swiss market.

Woman's Way

MADELEINE LEVASON

EMOTIONAL SHOPPERS

It's amazing the things women would rather have than money, according to advertising executive Janet Wolff.

Speaking to a group of Canadian businessmen recently, Miss Wolff declared this female love of spending was a fortunate trait and one they should cater to more carefully.

Women buy emotionally, she said, but this does not mean foolishly. Women put all their five senses to work each time they make a purchase. Successful selling of any product to women requires understanding of these feminine characteristics.

Women are far more sensitive to colour than men. Women also hear interpretively. This means that the words "low price" are apt to leave an impression like "inferior quality" on a woman's mind.

The feel of a product is also important and women always want to handle things. Women also notice the details and one fault will throw them off a purchase.

Women have very good memories, Miss Wolff said. They will never forget if they have once been fooled or tricked. They also want individuality, not exactly matching thousands of other women have. This means that they want everything and hear everything in the light of how it applies to them. Nothing is impersonal or abstract.

Canadian women have a new feeling about being Canadian today, she declared. They are developing a Canadian personality and are proud of the "Canadian way."

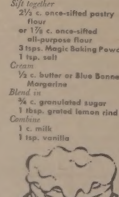
Because of this feeling, they will not always react kindly to suggestions that "imported" means superior. Canadian-made. The old patronizing attitude of talking down domestic goods because of lack of fashion or judgment in things Canadian.

Hats off to this cool'n dainty

LEMON LAYER CAKE

Sift together
2½ c. once-sifted pastry flour
or 1⅞ c. once-sifted all-purpose flour
3 tsps. Magic Baking Powder
1 tsp. salt

Beat until stiff but not dry
4 egg whites (at room temp.)
Gradually beat in
¼ c. granulated sugar
Add dry ingredients to creamed mixture alternately with milk; fold in meringue. Turn into two 8" round layer cake pans which have been greased and lined in bottom with greased waxed paper. Bake in hot oven, 375°, 25 to 30 mins. Stand on racks 10 mins., then turn out of pans.
Split cold cakes; put 4 layers together with Lemon Filling. Top with whipped cream or a sprinkle of icing sugar.
Combine
¼ c. granulated sugar
1 tbsp. grated lemon rind
Blend in
⅓ c. butter or Blue Bonnet Margarine
Cook, stirring, until very thick. Stir in 1 tbsp. butter or margarine, 1 tbsp. grated lemon rind, ⅓ c. lemon juice. Cool.



You'll serve it with pride when you say—
"I made it myself—with Magic!"

PULLED WITH EASE — In the picture above, the 23-foot cultivator was pulled through heavy Regina clay soil with ease by a nine-year-old Massey tractor. Owner-operator of tractor, Clem Bechard, of Lajord.

Booster shot polio vaccine

The Saskatchewan Council for Crippled Children and Adults has endorsed the Provincial Health Department's action in making available to all citizens up to the age 40 a booster polio vaccine shot. And the agency urges citizens to avail themselves of clinics being held across the province.

The Chairman of the Council's Medical Advisory Committee, Dr. A. A. Bailey, notes that so far this year there have been nine reports of suspected polio cases. In 1959, there were 46 Saskatchewan cases, including three polio deaths; but none of those who died had been immunized. To the end of May in 1959 there were 35 reported cases of polio in Canada, while to the same date this year there were 103 reports. This apparent upswing in the incidence of polio, Dr. Bailey suggests, warrants every action that can be taken to provide our citizens with maximum available protection.

Saskatchewan is one of the few places on this continent where polio vaccine has been made available free to all from infancy to age 40. Doctors across the province have also been supplied with vaccine for expectant mothers. Those over 40 are urged to consult their family doctors on the need for polio vaccine protection.

Margie Gecy of Montreal is a beauty queen with brains. Winner of 25 beauty queen titles, the versatile miss has studied eight languages and is hard at work on two more. She hopes to complete her chartered accountancy at McGill University next year. Vital statistics: 36-22-36.

SCHOLARSHIPS AWARDED

Two Westerners have been awarded scholarships by the Canadian Good Roads Association. They are Sidney H. Simmonds of Edmonton, and John A. Knowles of Winnipeg.

Mr. Simmonds was born in Winnipeg and graduated from the University of Alberta in 1954 with a bachelor of science degree in civil engineering. He received his master's degree in 1956, and is now assistant professor of civil engineering at the same university, where he lectures in structural engineering and applied mechanics.

Under the terms of the $2,000 Armco Drainage Good Roads Fellowship, Mr. Simmonds plans to attend the University of Illinois in order to work toward a Ph.D. degree in structural engineering, with secondary studies in soil mechanics.

Mr. Knowles, a native of Russell, Manitoba, graduated from the University of Manitoba in May of this year. He is the winner of the Standard Gravel Good Roads Scholarship, and plans to study highway pavement design, highway planning and soil mechanics at the University of Alberta.

These scholarships are two of six donated annually by Canadian industry under a program administered by the national roads association. Since the program was initiated nine years ago, it has enabled 30 outstanding young Canadian engineers to benefit from post-graduate studies in the highway sciences.

Adults and the children's diseases

Some of the so-called children's diseases can be much more dangerous to adults. German measles is considered a minor contagious disease for a child, but to a pregnant woman there may be serious consequences if she contracts the disease. Mumps is always painful but it may have more troublesome effects upon an adult.

Cultivator attachment keeps sweeps level

Depth equalizer demonstrated in field trials on Sask. farm

A new cultivator equalizer attachment unveiled at the Jerome Bechard farm near Lajord, Saskatchewan, may revolutionize field work.

Invented by A. S. "Sig" Anderson who brought out the Roll-O-Trip shank holder, and many other farm machinery improvements during his tenure with the Kramer Tractor Company Ltd. of Regina, the newest invention has eliminated the uneven action of the sweeps.

In its first trial run on the Bechard farm, Sig's equalizer was pulled through heavy Regina clay soil after a heavy rain by a 1951 Massey Harris tractor with 50 horse power draw bar pull. The 23-foot, three row, cultivator equipped with 18 inch sweeps moved easily with the equalizer in operation.

When the action of the equalizer was not in operation the tractor stalled as the centre section dig deep down into the ground.

Working principle of the equalizer is a system of leverage attached to the cultivator frame. When the ground is soft and spongy and the centre wheels dig in the equalizer springs go into action and transfer weight from the centre wheels to the outside wheels. In this manner uniform depth is maintained at all times the full width of the cultivator.

A further improvement is the adoption of leveller on the cultivator. A transparent plastic hose with each end curved upwards is filled with liquid and attached to the cultivator frame. Marks on the curved ends of the indicator show where the liquid should be when the cultivator is riding correctly.

If the cultivator is tipped forward, or backward, a hand operated levelling device behind the tractor seat will level the frame.

Farmers came from 400 miles away to attend the field trials. All were impressed with the results.

Production of the new cultivators will start shortly in a new location, where the Roll-O-Trip shank holders will also be made. At present the shank holders are being produced separately, but plans are to manufacture a complete unit embodying all the inventions Sig has introduced.

The shank holder, which is now field-tested and time-tested, was unveiled last year. The shank is held firmly between two rollers. If pressure against a cultivator foot exceeds 1,000 pounds, the shank will trip out of the ground, and then automatically react itself with spring action.

The shank holders can be attached to any cultivator frame with U-bolts.

Field trials of the new innovations are planned throughout the Prairies this summer. The runs on the Bechard farm were organized by Kramer Tractor.

"Officials of Roll-O-Matic Tiller Ltd. at Regina are president R. A. Kramer, vice-president A. S. Anderson, general manager and secretary H. W. Padwick; and treasurer, A. T. Kramer of Saskatoon."

Fire at the cottage

Fire in a small summer cottage or cabin can be very dangerous, especially if there is only one exit. The stove should be installed well away from the door, so that in case of fire, the way of escape won't be blocked. If coal oil or other open flame lamps are used they should be set on firm tables, well below the wooden ceiling. A small asbestos mat, hanging a few inches below the ceiling directly over the lamp will help to prevent the ceiling from scorching. Fuel oils should be stored outside the cottage, in a cool shady place, well away from the building.

Rural churches gather two tons clothing

Rosenfeld, Man. — "Well over Two Tons" of used clothing has been collected for Canadian Lutheran World Relief by nine rural congregations in southern Manitoba. And "some is still to come," reports Rev. John Kunkel here.

"We feel that this has been tremendous, and that it can be done in a rural area," the young ULCA pastor writes.

In each case the drive was community-wide, and depots were located in the towns for public use. In some towns pick-up service was offered.

MONGOLIAN RACE

The Mongolian race is the most numerous in the world, with more than 655 million individuals.

7235

by Alice Brooks

Gay area rug—most popular, new floor fashion! Crochet it yourself, and save, save, save!

Beginner-easy, takes little time! Single-crochet center; flowers of scraps. Pattern 7235: directions 28x40-inch rug in rug cotton or 4-strands of string.

Send thirty-five cents in coins (stamps cannot be accepted) for this pattern. Print plainly Name, Address, Pattern Number and send to:

Household Arts Department, Department P.P.L., 60 Front Street, W., Toronto.

THE BITTER HALF

Most of us know the kind of woman who lets you know that what she likes best about her husband is his wife.

If the sun were hollow, it would take 1,331,000 replicas of the earth to fill it.

Women's institutes: A place in history

Fifty years of service "for home and country" was given public recognition June 16 when a crowd of 400 people gathered on the Main street of Morris to watch the unveiling of a marker erected by the Historic Sites Advisory Board of Manitoba.

The handsome, rough-hewn marker pays tribute to the Women's Institutes of Manitoba an association of some 4,000 countrywomen belonging to 176 individual W.I.'s throughout the province. The first W.I. of these, formed in 1910, are named on the marker.

Highway fatigue

When driving on a long trip, it is well to plan a coffee or tea break every three hours in the morning and every two hours later in the day. If there are no restaurants along the route, vacuum bottles of hot beverage will provide a refreshing snack and an excuse for a rest. Taking plenty of time over meals and having a good wash will also help to ward off fatigue when driving on long stretches of highway. If drowsiness starts, stop at the side of the road and take a quick cat nap—it may ward off an accident.

USE SINGLE COLOR

In some cottages irregular ceilings and dormer windows in a room can be made less apparent by using a single color on walls and ceilings.

TIPS FOR PARENTS

By HELEN R. HEWSON
Parent Education Associates

VICTORIA, B.C.—On this trans-continental trip I have met two New Canadian families.

Both were taking their first extended trip since settling in eastern Canada a few years ago. They had left home prepared to see parts of Canada.

They could identify most of the trees along the route, knew the meaning of the rock formations along the north shore of Lake Superior.

They were familiar too with interesting bits of history of the hills, plains, mountains and cities through which we passed.

A traveler commented on the children's interest and fund of information about their adopted country.

"Yes," one of the mothers agreed. "We have read a great deal about Canada. We know the past and her appearance, but we do not know her heart. We do not know the people.

"Our children have many Canadian friends at school and on the street, but I have none. It is probably my own fault.

"Now I find it very hard to break through the reserve and formality of my old habits and established friendly, informal relationships with my neighbors."

Both mothers said they longed to have one or two Canadian friends, to be free to visit back and forth, to talk over and observe Canadian customs and Canadian families.

"So often our children say to us, We are the only ones . . . no one else has to do thus and so. We often feel at a loss, insecure.

All parents hear these objections, all parents feel at a loss now and then. Perhaps we would help each other, old and new Canadians, if we opened our hearts and our homes more freely to our newcomers.

Norman Peverell of Sherbrooke, Que., has been elected president of the Ontario and Quebec Baptists. He was elected at the closing session of the Baptist convention held this year in Hamilton, Ont.

Barbados visitor studies Sask. co-operatives

Seibert Chase, assistant co-operative officer for the government of Barbados, was recently on a tour of Saskatchewan in an effort to learn more of the operations of co-operatives and credit unions.

In an interview he remarked that it was the hope of his government to accomplish "what you have in Saskatchewan," in the field of co-operative achievement.

"It must be remembered that co-operatives are only seven years old in our country," he pointed out, "we still have need of an educational program to explain their value to the people."

Although still in its early stages, the co-operative movement in Barbados is showing sound and steady growth. Mr. Chase noted that there are 10 credit unions in Barbados, with a membership of 900 persons and assets totalling around $38,000. In addition, a number of marketing societies are in operation and there is one registered consummer co-operative.

His tour of co-operatives in North America is jointly sponsored by the World Extension Department of the Credit Union League; the United States Credit Union League; The British Columbia Credit Union League, and the Saskatchewan Credit Union League.

While in Saskatchewan, Mr. Chase, who was accompanied by his wife, studied the operation of various co-operative enterprises in the province, and co-operative legislation.

All hues are good news in leather shoes

Leather hues are good news to the woman who wants to color-coordinate her new shoes with her apparel.

A special group of "versatile tones" led the color line-up at the annual spring show presented by the Leather Industries in New York. They include white, bone, barley and black. All can be worn with virtually any of the new apparel colors or combinations.

White is seen in dazzling all-white and two-tone spectator pumps and casuals. Washable white leather, one of the newest achievements of American tanneries, can be wiped clean with a soapy cloth. It is usually seen in a striking leather grain in daytime walking shoes, with either self heels or stacked leather heels. White brushed and suede leather is combined beautifully with black patent leather or with sparkling hues, olive greens and other colors in soft, waxy finished leathers.

Bone and barley are the lightest members of the high-fashion brown leather family. Bone is a pastel which bestows a feminine barefoot illusion that stretches the leg line from knee to toe. Barley is a neutral beige that fits in with any one of the spring and summer fabric groups. Barley combines subtly with white leather or dramatically with black, as well as with the medium and deep, rich browns.

The flower pastels in this season's shoes are more than a footnote to fashion—they're a keynote in many cases. Some of the best-known designers are keying their most feminine dresses, skirts and cocktail and evening gowns to such new pastel leathers as Paris rose, yellow tulip, coral and lilac.

Paris rose is a vivid, frosted rose in smooth or suede leather that is often enhanced with a strip or lacy fringe of white leather. It is ideal with a flower print dress where pink or rose predominate. Yellow tulip is a cool yellow for both casual and dress shoes, equally effective with either a white or black costume.

Olive green is a favorite for leather "fun" shoes. You'll also see it in unusual twisted, crushed and draped leathers in elegant latticed sandals and downy soft suede or buttery smooth leather daytime pumps. The college and high school set is rapidly adopting as its own olive green in casual flats with little Queen Anne, Louis or oval heels, in black, white or stacked leather.

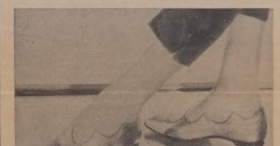
Pewter grey is the season's new luminous grey inspired by early American pewterware. Like olive, it is a youthful color with many purposes—for town, for late-day, for the casual slip-on and for the functional oxford. Pewter grey leather handbags will be tremendously popular and these, of course, match perfectly the same color in leather shoes.

New S.T.C. bus depot in Regina officially opened

The new Saskatchewan Transportation Company Regina bus depot was officially opened recently by Hon. J. T. Douglas, minister of highways and transportation, and chairman of the company's board of directors. Presiding as chairman for the ceremonies was W. W. Flynn, S.T.C. general manager.

'The Family Doctor'

"NATURE IS TANNING MY DAUGHTER NOW — WHERE I DID TEN YEARS AGO."



THE PERSIAN INFLUENCE INVADES AT-HOME GLAMOUR this spring, according to the Shoe Fashion Service of Leather Industries of America. Here is golden crushed kid leather in a pointed-toe, spooled flat heel shoe with interesting, high-riding scalloped detailing around the entire collar.

Sew-easy duo PRINTED PATTERN

OLDEST IRON MINE

The oldest operating mine in the world is the Dalkarisberg, Sweden, iron mine, which has been operating for 800 years.

A Lovelier You

By MARY SUE MILLER

SPRING REDUCING SERIES. Here's help for damsels who dream of longer skirts. They are the ones, of course, who also bemoan a heavy or flaccid calf.

As skirt lengths are not likely to drop appreciably in the near future, help comes in the form of calf-reduction. For a top-flight slimmer, use this:

Sit erect on a carpeted floor, with the legs outstretched and together; with the toes drawn backward as far as possible. Slowly separate the legs and drag—really drag—the calves along the floor as far as possible. By reversing the action, return to starting position. Repeat fifteen to twenty times, daily.

The routine's action offers a combination of exercise and massage that is ideal for achieving ideal contours. So do make the most of it!

To hasten results, give a thought to the way you walk. Try to keep your tread light and quiet. The muscular control this takes is an exercise in itself, one of the best. Besides, there is an immediate return, and that is increased grace for the entire figure.

VACATIONERS sun bathe on the sandy beach at Katepwa Beach, Saskatchewan. —Sask. Photo Services.

The Bible today

In the area of Malaya, Singapore and North Borneo the National Bible Society of Scotland reports that the circulation of Scriptures increased in 1950 to 14,017 Bibles, 7,538 New Testamenta, and 88,395 Portions.

That the Bible still speaks with power is illustrated by a story told by one of the Colporteurs, Mr. Tan. Chin Hock who relates that a young acquaintance said to him, "While I was at school I saw you selling Bibles during the interval. I bought a copy of St. Luke's Gospel as I was studying that book for my senior Cambridge examination. After passing the examination I just left the book lying about at home, and it happened that my father took it up and read it, and has become a Christian."

Another worker, Mr. Loh Chew Chee accompanied the Malayan Christian Council's audio visual unit to several towns and villages in North Johore. Since then he has made several "follow-up" visits to homes of people who bought Scriptures. He writes, "The result was that 14 people followed the Bible's teaching, believe and be baptized."

Suggested Bible Readings

Sunday—Romans 15: 1-33
Monday—1 Kings 8:12-24
Tuesday—1 Kings 8:27-45
Wednesday—1 Kings 8:46-61
Thursday—Job 38:12-28
Friday—Job 26: 1-41
Saturday—Amos 6: 1-14

High blood pressure is more than twice as common among overweight than among average persons.

POSTED TO GERMANY—Sgt. Matthew A. Gleisinger of Regina, starts a second postwar tour in Germany when he joins No. 1 Canadian Base Ordnance Unit in Antwerp for a two-year tour of duty. In 1951-52 he completed a one-year tour with ordnance units stationed at Hamburg and Hanover. He has been with No. 16 Regional Ordnance Depot in Winnipeg since May, 1957.

Special farm tour overseas

In response to many enquiries from Canadian farmers about opportunities to see scientific advances in agriculture in England and Scotland, the CPR has set up a special overseas tour for this fall. It is being run in co-operation with the Scottish Farmer in Scotland and the National Farmers Unions of England and Wales, and has been endorsed by the Canadian Federation of Agriculture.

The party will sail from Montreal in the Canadian Pacific Empress of Britain on October 4 and leave England in the Empress of France on October 28. Travellers can go to Montreal as individuals or arrange through CPR agents to travel in groups.

The tour, which has been arranged through the CPR's department of immigration and agricultural developments, is timed to give the Canadian visitor an opportunity to see every highlight of agricultural development in the Old Country.

There will be a chance to find out how sheep are handled in Ayrshire, see the manufacture and testing of British-made farm implements, attend the famed London Dairy Show at the Olympic, tour the Scottish highlands and English downs, and visit farms in districts where many well known livestock breeds originated.

A highlight of the Scottish tour will be a visit to Ayr, the home of Robert Burns and the West of Scotland Agricultural College and the Hannah Dairy Research Institute. There will also be a trip to Mr. Edmonson Mooh of Farm where, they're developing an Ayrshire-Galloway cross for beef.

Time is also provided for sightseeing in such famed cities as Edinburgh, Glasgow (via beautiful Loch Lomond), Windermere (via the English Lake district), London and Canterbury.

It is a tailored-to-measure tour designed to help Canadian farmers gain valuable insight into agricultural pursuits that the individual traveller could never acquire.

CAPTAIN LLOYD W. McCULLOCH of Wawanesa, Man., will be posted to Germany in July. An officer of the Lord Strathcona's Horse (Royal Canadians), Capt. McCulloch served with armoured regiments during the war in England, North Africa, Italy and Northwest Europe. In postwar years he has held appointments in Meaford and Camp Borden, Ont., St. John's, Newfoundland, and Calgary. He is now with the Instructional Staff, Manitoba Area, with headquarters in Winnipeg.
—National Defence photo.

Man. products on display at "Ex"

Manitoba's got an eye opener at the end of June when they toured the New Products display at the Red River Ex. Manufacturers from various parts of the province put their best foot forward with 67 new products on exhibit.

The annual display, fourth of its kind, featured the products of 47 Manitoba firms. These products range in size all the way from a 23-foot-long physical training gymnasium to an industrial diamond drill bit and three-way screwdriver. They'll be varied too, running the gamut from ladies stockings to potato chips to motor boats and not-clog sewage and trash pumps.

Some of the products are being produced in Manitoba for the first time. Others were produced here for the first time in the past 12 months by new firms or by established manufacturers.

The 67 products competed for merit awards to be presented by Hon. Gurney Evans, minister of industry and commerce. Five judges picked the winners. The products were judged on the basis of design, engineering and production.

The display, shown at the Red River Ex from June 24 to July 2 at the south end of the main floor, was also seen at the Provincial Exhibition at Brandon from July 4 to 8 in the Display Building.

NATIONAL AIR FORCE DAY—Bill Noice Jr. makes believe that he is flying high above the clouds at the controls of his jet flight simulator. He was one of thousands of spectators at the National Air Force Day at the Royal Canadian Air Force Station, Rockcliffe.

MORE THAN 1,000 YEARS AGO flags fluttered from the masts of Viking ships and today they still play an essential and colorful part in the life of the seafarer. Here Quartermaster Jardine Fitzpatrick of the Cunard liner Sylvania takes down the Blue Peter as his ship sails from Montreal. The Blue Peter—P in the International Code—is flown from the masthead to indicate that the vessel will sail within 24 hours.

Moose Mountain Provincial Park popular with tourists

Moose Mountain Provincial Park, long a favorite spot with summer holiday vacationers, has reached an all-time high in popularity during the 1959 summer tourist season, according to a recent survey. The survey revealed that during one weekend, an estimated 13,000 persons visited the park.

Kenosee Lake, bounded by miles of sandy beaches, is located in the park and is a paradise for campers, holidayers and fishermen.

Tourists and visitors are finding the park camping sites particularly enjoyable and are making increasing use of them this season. One recent count revealed an estimated 100 tents and trailers occupying the areas.

Lynwood campsite built just recently, will accommodate 30 units and provides individual fire places, picnic tables and garbage disposals.

Many campers from Alberta and Manitoba are staying at the campsites just now and there are others from the northern United States. Only for one night's stay at the campsites is 50 cents for tenters and one dollar for trailers.

A second campsite is situated closer to the resort itself and also handles numerous campers.

Built by the park board three years ago, Kenosee Hall has become a great attraction with holidayers, both young and old.

Recreation director at the hall is Saskatoon school teacher Clarence Garvie, who is now in his second season as director.

Mr. Garvie begins early in the day and usually carries on his duties into the evening. "I try to add a personal touch to the fine facilities the parks branch have provided," said Mr. Garvie in an interview.

On days when it is too cold to go swimming or on bathing, the hall is usually teaming with youngsters. Equipment for arious games is provided. A horse shoe pitch and volleyball court are located on the grounds outside.

Square dancing is a popular activity three nights of each week at the hall.

A modern restaurant, with booths, a spacious counter, an up-to-date kitchen and other conveniences, was opened by the parks branch this year. Groceries, magazines as well as other necessities can be purchased at the store.

An 18-hole golf course and a miniature golf course are other attractions. The annual Kenosee Lake men's golf tournament will be held Sunday, August 16th.

It will be a 27-hole medal play tournament and is open to anyone. The ladies will hold their tournament Friday, August 14th.

Perch fishing has been excellent this year and fair numbers of northern pike and pickerel are also being caught.

Picnic spots, with tables and other conveniences, are located throughout the park for motorists.

Both modern and non-modern cabin accommodation is available at the park. The chalet provides six double and six single rooms and has an excellent dining room.

At nearby Carlyle Lake, which is 20 seven miles from Moose Mountain park, four beaches—Sandy, Crescent, Long and Horse—are popular with tourists. Cabin accommodation is also available for tourists at Carlyle Lake.

B.C. students on European tour

Nearly 170 Victoria High School and University students left Vancouver aboard a CNR train on the first stage of a seven-week trip to Europe.

Accompanied by nine teachers, the group arrived in Montreal where they boarded planes for Europe.

The tour, arranged by the B.C. Student Travel Association, will take the party to major cities in seven European countries. Most of the students saved their after-school earnings over the past two years to pay for the trip.

The group will leave England August 13 for the homeward journey, and from Montreal will travel over CPR lines, with a stopover at Ottawa, to arrive back in Vancouver on August 20.

GOOD BRUSHING NEEDED

Costume jewelry that discolors the skin may simply need a good brushing with warm, soapy water. Then rinse and dry thoroughly and coat with colorless nail polish.

HANDYMAN ABOUT THE HOUSE

By GORDON DONALDSON

Pal of mine who makes up in brains for what he lacks in energy was faced with the job of laying a few flagstones to make a path along a worn bit of grass.

Rather than prepare the ground or dig spaces for the stones, he just turned the hose on it, dropped the stones into the resulting mess where they embedded themselves comfortably, sprinkled some grass seed around and went back to sleep.

Patios can be built almost as easily — or they can be elaborate jobs, result of weeks of preparation.

Either way they're far less trouble to maintain than nature's product, the grass lawn.

My wife, who tends our miserable weed-bed, claims wall-to-wall concrete is the answer. And maybe it is.

The simplest kind of patio can be as cheap as the same area of sodded lawn, if you make your own stones.

One bag of cement, costing about a dollar fifty, should make a dozen blocks 16 inches square and about 1¾ inches thick.

First hammer together some frames of two-by-two inch lumber. Lay them on a flat surface of newspaper or polyethylene and prepare the mixture.

Mix one part cement to one of sand and two of gravel, add some coloring material if desired—red and yellow are the cheapest colors—and ladle it into the frames. Beat it down with a piece of wood.

After an hour or so, smooth with a steel trowel or, if you haven't got one, hammer down on a piece of wood.

Cover over and keep slightly damp so that the concrete "cures" slowly. After three or four days—out come blocks. They'll come out easier if the wooden frame has been oiled first.)

A gimmick used by patio builders who yearn to leave their footprints in the sands of time, is to press little plywood cut-outs into the concrete when wet, leaving cute impressions which look attractive at the time but doubtless drive them mad after a year or two.

Dig out the area to be patioed, make sure it is reasonably level, then tip in a layer of sand. This should be a good three inches thick to allow for drainage.

Tamp the sand down, lay the blocks, then sprinkle some more sand on top and brush it into the spaces between the stones.—TNS.

Always-in-bloom!

by Alice Brooks

Spark a wall, an entire room with a vivid bouquet of colors straight out of a rose garden.

Easy stitchery! "Paint" this bouquet in glowing pinks, and precious yellow-to-gold of a Talisman rose. Pattern 7104: transfer 10x14-inches; color scheme.

Send thirty-five cents (coins) for this pattern (stamps cannot be accepted.) Print plainly name and address, pattern number to:

The disappearing land

(The Christian Science Monitor)

Possibly there was a Swenson's Farm in your neighborhood. There have been lots of them, with many different names.

Today Swenson's Farm is an industrial office building area. The cows have moved.

Urban growth has swallowed up farm land in United States since the 17th century. So there is essentially nothing new in the fate of the Swenson acres. What is new is the pace of urban growth.

Twice as many people tend to eat twice as much food. And, with today's living patterns, they also tend to take up about twice as much living space.

We do not wish to be alarmist. But we believe citizens should become more aware of the problems of urban sprawl, lost tillable land, and lost green space.

Recently Gladwin Young, assistant administrator of the United States Soil Conservation Service, put half the problem in concrete terms. He stated that if American farm production per capita is to continue at its present rate, the United States will need 250 million more acres under cultivation by 1980.

The matching half of this problem can be seen in a previous report of the National Association of Soil Conservation Districts. It showed highways, airports, suburban expansion, and perhaps industrial growth eating away about a million acres of tillable farm land every year—a loss of 20 million acres by 1980.

This is sobering. It runs so contrary to our current problem of seemingly endless farm surpluses. But it should be thought-provoking rather than frightening.

There are two ways in which this loss can be made up. More marginal land can be reclaimed. Or the combined efforts of plant geneticists (creating new hybrids) and agricultural technicians (improving mechanical methods for working the soil) can continue to raise crop yields per acre. Both will be needed.

But even with these counterbalances, urban America's voracious appetite for good farm land is endangering truck farming in the South and Far West and green views, during and recreation areas in the North. The ranch house (400 acres) is yielding to the ranch house (¼ acre).

The answers to this sprawl are not easy. In many cases the proper tools of governmental control do not exist. Suburban zoning helps. So does the rebirth of central cities in new apartment-and-town-house concentrations. But metropolitan planning and perhaps even regional zoning of industrial and agricultural sites may be needed. Better mass transport systems will prevent clover-leaf-type diamonds. Revised local property tax assessments encouraging continued farming of rich soil areas may prove wise in some exurbs.

Planning now for green belt and truck or dairy farming reserves should prevent irreversible loss.

In many cases what happened to Swenson's Farm may be useful, even an improvement. But citizens should know where their towns are going before letting subdivision and factory relocation eat helter-skelter into the countryside. They and their lawmakers should start forging new governmental tools to control urban growth so that a proper city-rural balance will be preserved. It's hard to get milk from an office building.

Rosetown—a town of roses?

(The Eagle, Rosetown, Sask.)

One of the best ideas this writer has ever heard that would serve the double purpose of beautifying and publicizing our town came from Jack Greenall in this office. Here is Jack's suggestion: He asks that everyone in Rosetown plant roses in every available piece of ground in town. This is not difficult. We can all grow roses. They are cheap and are beautiful. Within just one year, our town, during the summer months, could be as beautiful and sweet smelling as Portland, Oregon, at very little expense to any of us.

Just imagine the impact this would have on the tourist. And just imagine the awakened pride of every member of this town and district that their town had become one of the few beauty spots of Canada.

We have no doubt that the local Horticultural Society, the Town Council, The Chamber of Commerce and all other organizations in town will support this idea. Let's go. Let's make Rosetown a town of roses.

(The Post-Review, Hudson Bay, Sask.)

THE END—Art Daigleish of the Etomami district got this bear with one shot right through the eye. He was out at Mink Creek bridge along the Armit road looking at some traps when he saw the bear on the other side of the creek looking him over. Art went for his rifle and when he started back he met the bear trailing him. That was the end for Old Brute. The medium sized black bear weighed in the neighborhood of 150 lbs. and appeared to be about two years old.

IN HIS SERVICE

What you owe your children

Anybody here got a girl? I mean a child-girl, not a friend-girl. Aren't they something? Full of innocence and nonsense, with all kinds of hair to wash and brushing, with "softy" skin, and built in womanly traits, like talking.

Mathematics doesn't work right with girls. Two girls are more than four; four girls like eight. They multiply by

Jim Fairfield

"You be the mother and I'm the father," and there's another family in your house. Or a team of horses maybe you got stabled in the ball closet? Some days there's a clinic in the bathroom and nurse will put a splint on any broken bits—you got any? A cut maybe? Even last year?

How will she grow? What's her future to be? At any circumstances pushes her around? It she to grow up with her hopes in marriage, a family and . . . ? Who's she going to pick? Remember, no help from you—this she does herself. Maybe it's slim pickin's around home and she moves to greener fields. Are you going to let her? Can you go with her?

Responsibility

There is a soul in that girl, and she's even thinking of it (and that's early); she should be married to God, through the only door: Christ Jesus. "I am the door: by me if any man (woman, or child) enter in, he shall be saved, and shall go in and out, and find pasture . . . I am come that they might have life, and that they might have it more abundantly." John 10:9-10.

Only then will her life be life. You feed her, clothe her, read her stories, give her piggy-backs — but you cannot say, "Lo, I am with you always, even unto the end of the world." Matt. 28:20. Only God can guide her perfectly, according to His purpose.

Are you aware of her talents? Only God, by His Spirit, can bring the fulness of life to your children. Do you stand in the way of that door, that they cannot enter? Are you forbidding entrance because you have "ideas of your own about God"?

Boys too

Boys maybe got a few more square corners than girls, a few more arms and feet, a little harder to fill up at eatin' time — but they're every bit as lovable. Particularly when it comes fishing season. Girls need their hooks wormed and a cushion and right away a fish. Boys know better — about fishing. But they're still boys about marriage, and a family and responsibilities.

He won't like it if you try to live his life for him" — but there is a Way by which he can live which will far surpass your advice. In every situation as a husband and father, at work and at home, the sure guidance of God is: His Spirit, will more than take your place.

Do you know his inner self, like God does? Do you know the strengths, the weaknesses? Would you know how to encourage and develop all his strong points, and at the same time correct the faults? Do you know where talents are best applied, where his life will be most fruitful?

God does

God knows perfectly your son, and your daughter, and yourself. He knows all that is temperament and personality, the little insignificant things that add up to a whole, the inclinations undeveloped talents and hidden problems. Only God can make sense out of such complexity. If you have been running your own show and have been brining up your children the same way, you're missing out! It takes God's perfect knowledge, of you and of the people you meet, of all the world —to give you and your children the guidance you need.

God's guidance isn't by a list of rules. His Laws show us just how much we need His guidance, when even thinking to kill is breaking the Sixth Commandment. And just knowing isn't going. Traffic laws are to be known and kept, but they're no help in steering the car. For that you need eyes and light. Without the Holy Spirit of God, living is like driving in pitch darkness without lights. All you do is feel your way along, taking any road or direction at all, missing the proper turns, hitting all the potholes of misdirection . . . of self-direction.

You and your children need His guidance, for He is light Himself. He leads the Way through the most complicated situations so that you are able to follow.

How can you bring your children to be filled with the Holy Spirit of God? They must make room for Him to do so. How can you help them in this if you do not know of this yourself? "As it is written, eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him. But God hath revealed them unto us by His Spirit: for the Spirit searcheth all things, yea, the deep things of God." 1 Cor.2:9,10.

You can know, the Spirit will reveal to you the unknown things of God. Only then can you introduce your children to Him, and to abundant life.

"But if from thence thou shalt seek the Lord thy God, thou shalt find Him, if thou seek Him with all thy heart and with all thy soul." Deut. 4:29.

"And ye shall seek me, and find me, when ye shall search for me with all your heart." Jer. 29:13. "But without faith it is impossible to please him: for he that cometh to God must believe that he is, and that he is a rewarder of them that diligently seek Him." Heb.11:6.

If I can help you in your search, answer a question, direct you to a verse of scripture, please write, care of this paper.

CAPTAIN LESLIE F. GREENE of Brooks, Alta., an officer with the Second Regiment, Royal Canadian Horse Artillery in Winnipeg, will be posted to the Instructional Staff in British Columbia Area early in July. He enlisted in September, 1939 and served with artillery units in England, France, Holland, Belgium and Germany during the war. In post war years he attended the Staff Artillery Course at Camp Shilo, Man., and completed a tour in Korea with the 51st Field Regiment, before joining the Prairie Command Instructional Staff in 1954.

—National Defence photo.

School students get CD training

A two-week course in elementary civil defence training will be held at Arnprior, Ont., late in July for a group of hand-picked high school students from across the Dominion.

The young people will receive approximately 50 hours of instruction in survival planning at municipal level with emphasis on individual training in government, emergency measures, planning, radiation monitoring, first aid, basic rescue, home nursing, emergency feeding and fire prevention and firefighting.

TURKEY'S PIN-FEATHERS

Turkeys are not matured enough for market until all their feathers are fairly well grown, and all pin-feathers have disappeared; they should then be in market condition. Before this they have not grown the full amount of breast and leg meat, and they have little or no fat, which is necessary to full juiciness and finest flavor of their flesh. — Canada Poultryman.

USEFUL

A roll of clear, ribbed "Fabrilite" comes in handy at the summer cottage. It may be used as a draining board or as a mat for the floor in the sink area.

YOUR EYES NEED PROTECTION JUST AS MUCH YOUR SKIN

White sands plus sunshine and sun-sparkled water may be a boon to camera fans this summer but an overdose of them can result in headaches and eyeache, unless proper precaution is taken.

Just switching from the dimness of a summer cottage to the dazzle of the summer sun, for example, can easily strain your eyes without your even knowing it. And if you let your eyes get tired, you'll soon feel tired all over. Maybe start to wonder if you're getting old before your time.

Results of a recent survey by the Murine Company show that the mere act of seeing consumes up to one-fourth of all the energy your body puts out. When getting ready to put on the suntan oil this summer, therefore, it's important to remember that your eyes need protection just as much as your skin.

Solving eye fatigue involves mostly common sense. Here are a few basic rules: First of all, protect your eyes against glare with a good pair of sun glasses, but be sure to take them off at sundown. Give your eyes a rest several times a day, taking time out to close them for one or two minutes.

Avoid reading in a moving vehicle or in poor light, and don't ever try to sew or read while watching television. When lying in the sun, keep the lids well protected against excessive sunburn and try not to rub the eyes with your fingers.

If, in spite of it all, your eyes do get tired, remember that the regular use of an eye lotion can be of great help in providing relief.

There's a yellow plastic squeeze bottle in your favorite store which dispenses one drop of eye lotion at a time for easy use. It's new in Canada and has been specially designed so it will neither break nor spill. It also fits the hand and can be easily carried in your pocket, purse or overnight bag.

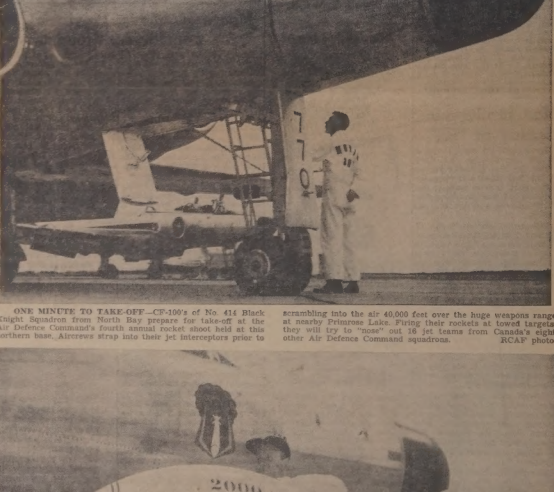
This means you can now have as eye lotion available at all times to use as often as you like. A good eye lotion is absolutely harmless and can be used as frequently as desired. It can do wonders this summer in helping you offset or prevent tired eyes.

At the beach this summer, when getting ready to put on the suntan oil, don't forget that your eyes need protection just as much as your skin. Eye lotion is now available in Canada in a new yellow plastic squeeze bottle that dispenses one drop at a time for easy use. It's easily portable and will neither break nor spill.

Drinking water

Most people drink too little water. During the summer months, the body loses more moisture through perspiration and it is important to balance the loss by a greater intake. Drinking plenty of milk and fruit juices will help to supply some of the necessary fluid for those who do not enjoy plain water, or where there is any doubt as to the purity of the available water. The local water works or health department will always advise on purification or testing of water from natural sources.

ENJOY LIVING + SWIM SAFELY



ONE MINUTE TO TAKE-OFF—CF-100's of No. 414 Black Knight Squadron from North Bay prepare for take-off at the Air Defence Command's fourth annual rocket shoot held at this northern base. Aircrews strap into their jet interceptors prior to scrambling into the air 40,000 feet over the huge weapons range at nearby Primrose Lake. Firing their rockets at towed targets, they will try to "nose" out 16 jet teams from Canada's eight other Air Defence Command squadrons. RCAF photo.

FREEDOM INSURANCE—At the most unique shooting contest in Canada, CF-100 jet interceptors unleashed rockets while flying at 40,000 feet trying to hit six-foot long targets. At RCAF Station Cold Lake, Alta., CF-100 fighter teams from every Canadian-based squadron competed from May 30 to June 3 in the fourth annual Air Defence Command rocket meet which is designed to increase the efficiency of air defence personnel by fostering inter-squadron competition.—RCAF photo.

CARRYING A 'RADOP', the target that CF-100 jet interceptors are trying to hit with their rockets during the fourth annual Air Defence Command rocket meet at RCAF Station Cold Lake, Alta., is Leading Aircraftman Jack Booth, 37, a World War Two air gunner who holds both the Distinguished Flying Cross and the Distinguished Flying Medal. In actuality the six-foot-long target weighs only 14 pounds and is 18 inches in diameter. Specially made to reflect radar pulses so they can be seen on the aircraft radar scopes, the bright red radops are towed by a fine thin wire, 8,000 feet behind a fast-moving jet. Flying at 40,000 feet over the huge weapons range at nearby Primrose Lake, aircraft of the Weapons Practice Unit at Cold Lake ensure that the nine interceptor squadrons competing at the meet have plenty of radops to fire their rockets at. —RCAF photo.

Education vital to Indians

Kindergartens for children under six, vocational training programs, provision of non-day meals in northern day schools, and integration of Indian children in non-Indian schools at an earlier grade, were among recommendations contained in the Saskatchewan government brief on Indian affairs, presented in Ottawa to the joint committee of the Senate and the House of Commons on Indian Affairs.

The brief further suggested that facilities of the Saskatchewan department of education, and the vocational education branch of that department, together with the extension services of the department of agriculture and the University of Saskatchewan be utilized to provide the Indians with academic and vocational education on reserves.

The emphasis on education for the Indian was explained as follows . . . "the future of the Saskatchewan Indians hinges largely on their transition to wage employment off reserves . . . the rate at which this movement occurs in turn depends to a large extent upon the amount and kind of education Indians receive."

It was suggested that a study be made of the reasons which lead Indians to drop out of school in the early grades.

Figures revealed that 4,451 Indians in Saskatchewan attended various types of schools—residential schools, Indian day schools, a seasonal school and a hospital school.

However, of this number less than two-thirds reach grade eight; only five of 30 reach grade 10, and only two or three out of 20 reach grade 12. It is only just recently that Indian pupils in northern Saskatchewan have entered high school grades at all.

The brief states: "Low final educational achievement, which is the result of . . . early school leaving, is the chief problem in the education of school-age children."

It was noted that problems exist at every level of education for the Saskatchewan Indian. There is wide variety of recommendations on educational facilities were contained in the brief, embracing pre-school levels, and adult education and vocational training programs.

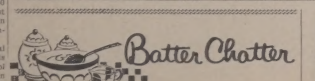
PEACE RIVER BRIDGE—This 2,337-foot bridge, 120 feet above the Peace River was officially opened July 9 by the Honorable George R. Pearkes, V.C., minister of National Defence. A vital link on the Alaska Highway, 34 miles north of Dawson Creek, B.C., it replaces one which crashed into the river October 16, 1957, as a result of a bank slide. Built at a cost of $4,000,000, it is part of the Canadian Army's north-west highway system.

Photo is taken from the north bank of the river. Attending the opening ceremonies from Edmonton were the General Officer Commanding Western Command, Maj. Gen. Geoffrey Walsh. Construction and consulting officials, representatives of Defence Construction Ltd., members of the B.C. Provincial government and local community representatives will also attend.

—National Defence photo.

Weeks of Blue Monday

There are often days when everything goes wrong and it isn't easy to control an outburst of temper or feelings or depression. But if these "days" happen too often, it is wise to do something about them. If it seems increasingly impossible to get along with people, or if the fits of depression occur too often, consultation with a mental health clinic can usually help the situation.



SWEET SURPRISE

This is the time of year when ening; keep at lukewarm temperature.

the hand that reaches for the lemonade pitcher is sure to be reaching also for some tempting treat to go along with the half-frosty beverage. Whether the agenda for the day includes iced coffee for a summer kaffee klatsch, or a fruit cooler for the afternoon break, try serving these Frosted Novelty Buns as an accompaniment. And don't be surprised if there are a number of requests for the recipe, because these buns are quite different from the usual sweet roll.

The buns are light and tender with an unexpected filling of chopped raisins and pecans, sweetened with brown sugar and flavored with orange rind and juice. After baking the buns are capped with confectioners' icing. For a little extra zip try adding a touch of rum flavoring to the icing.

FROSTED NOVELTY BUNS

Yield — 1½ dozen buns

½ cup milk
¼ cup granulated sugar
½ tspn. salt
¼ cup shortening
½ cup lukewarm water
1 tspn. granulated sugar
1 envelope active dry yeast
3 cups (about) once-sifted all-purpose flour
½ cup chopped pecans
½ cup chpd. seedless raisins
½ cup lightly packd br. sugar
½ tspn. grated orange rind
1½ tbspns. orange juice

Scald milk; stir in the ¼ cup granulated sugar, salt and shortening. Cool to lukewarm.

About three miles of laundry are hung on lines by the average housewife each year.

Measure lukewarm water into a large bowl; stir in the 1 tspn. sugar. Sprinkle with yeast. Let stand 10 minutes, then stir well. Stir in lukewarm milk mixture and 1½ cups of the flour; beat until smooth and elastic. Work in sufficient additional flour to make a soft dough — about 1½ cups more. Turn out on floured board or canvas and knead until smooth and elastic. Place in greased bowl. Grease top. Cover. Let rise in a warm place, free from draft, until doubled in bulk —about 1½ hours. Punch down dough. Turn out on lightly-floured board or canvas and knead until smooth. Divide dough into 2 equal portions. Form each portion into a 9-inch roll and cut into nine 1-inch pieces. Cover with a tea towel and let rest while making filling.

Combine the chopped pecans, raisins, brown sugar, orange rind and juice. Divide in 18 small mounds. Flatten 1 piece of dough and place a pecan-raisin mound in center; wrap with dough and seal joints; drop into a greased muffin cup. Repeat with remaining pieces of dough and filling. Grease tops. Cover with a tea towel. Let rise in a warm place, free from draft until almost doubled in bulk — 45 minutes. Bake in moderately hot oven, 375 deg. F., 15 to 20 minutes. Turn out onto cake racks; turn topside up and frost with the following Confectioners' Icing; decorate each bun with a pecan half.

Confectioners' Icing: Combine 1½ cups sifted icing sugar, ¼ teaspoon vanilla, ½ teaspoon rum flavoring (optional) and sufficient milk to make a rather stiff icing.

Stanley McMahon has succeeded in getting away from it all for the last five years. He lives as a hermit near Barry, Ontario, in an 8 by 10-foot cave with wood stove, home-made bed, a table, a chair and a lamp. He works sometimes as a farm hand. Now 48, he renounced "a frantic world of endless, aimless work and news of wars."

AGRICULTURAL INFORMATION

A 200-page handbook of agricultural information is available from the University of Saskatchewan's Extension Department in Saskatoon.

Called the "Guide to Farm Practice in Saskatchewan" it was revised this year and new copies have just been printed. It contains information based on research, experimental and practice in a readily usable form. Among the subjects dealt with are climate, soils and fertilizers, cropping systems, farm equipment, grain crop varieties, forage crops, horticulture, weed control, plant diseases, insect pests, livestock, dairy products, poultry, animal diseases, farm management, irrigation and water supply, beekeeping and rat control.

YOU WILL FIND GOOD VALUES IN THE WANT ADS

A ship is to have fun

This year, more parents than ever will take their children to Europe— and find it a delightful, stimulating experience. According to the Cunard Line, a good percentage of these parents will be return voyagers who discovered on previous trips that children and carefree relaxation do mix, particularly aboard ship.

Life at sea is an exciting adventure and children from the toddler age through the teen stage take to it like ducks to water. For the youngsters, all Cunarders have colorful playrooms that are designed to simulate the ship's bridge or in a Mother Goose motif and are filled with toys. Here parents may leave the tiniest tots during the day with complete confidence. A fully qualified playroom stewardess is always on hand to amuse each child with entertaining games and projects drawn from her imagination and years of experience. Provision is also made to care for infants in little cots.

At mealtimes, tempting menus are prepared for the young passengers. The kitchens are stocked with all standard items and baby stewardesses will make formulas for babies as well as sterilize the bottles. Older children may, of course, order their own full-course dinners identical to junior size at their parents' table.

Children have fun aboard ship and fun needs play clothes and simple cotton dresses for playroom and deck. In Cunard linens, it also means an invitation to the organized children's party that includes games, balloons, streamers and, of course, ice cream and cake.

At the end of each eventful day, the children will be ready for blissful sleep. On request, the night steward periodically will look in on the youngsters or often a stewardess can be engaged for baby-sitting duties.

PROTECT FLOORING

Touring time usually means crumbs and debris in the car. To protect the flooring against the onslaught of untidy kids, cut mats of clear, ribbed "Fabrilite".

Vacation to your heart's content: You can if you follow this advice

This time of year there is no more magical word than "vacation." Will your vacation live up to your expectations? Or will the magic evaporate under too much sun and heat, and the strain that unaccustomed exercise can put on the heart?

There are a number of simple things you can do to keep the magic in your vacation. They will help "beat the heat" and guard your health, according to the Saskatchewan Heart Foundation.

If you are a desk worker — particularly if you are in the upper age bracket — and suddenly turn athlete on vacation or summer weekends, you may put too great a burden on your heart. When you plan a vacation that includes moderate or vigorous exercise, like climbing mountains or playing tennis, and have not been exercising regularly, begin toning up your body beforehand, bit by bit. Or substitute plans for a less demanding vacation. Best of all, acquire the habit of taking exercise twice in the week out. Moderate exertion is generally considered good for the heart and circulatory system.

Be especially careful not to overexert when there is sudden onset of hot, humid weather. The heart has to work even harder under these conditions. In addition to supplying blood to active muscles, your heart has to provide a great flow of blood to your skin to cool your body on a hot day. Evaporation of perspiration is part of this cooling process. To help this process, drink plenty of water during heat spells and wear light, well-ventilated clothing.

Perspiration also uses up salt from your body. Salt pills help some people but should not be taken except on a physician's advice. Heart patients should be particularly careful to follow the physician's orders in this regard.

If you bask in the sun, accustom yourself gradually. Never expose yourself to long periods in the sun when it is very hot.

Planning a trip should begin well in advance so that you leave things in order at home and don't carry worries and tensions with you. If possible, make travel arrangements ahead of time. Suit them to your health and your wishes. If you are due for a physical checkup, have it before you go.

It is advisable to start out early in the morning, to avoid travel in the hottest part of the day. And take it easy!

When you are travelling, whether by car or bus, plane or train, try to do a little walking every half hour or so. The change from sitting is good for the circulatory system.

Knowing what precautions to take, you will be able to relax during your vacation this year and write your friends that you are indeed "having a wonderful time."

QUICK CANADIAN QUIZ

1. In 1880 Mrs. Emily Howard Stowe of Toronto gained fame for what achievement?
2. Officially, who appoints the Lieutenant-governors of the provinces?
3. Family allowances and old age security pensions are paid to all Canadians in the 1-15 years and 70 years and over groups. Combined, the these two groups represent 8.3, 22.1 or 38.3 percent of the total population?
4. In the past 10 years how many Canadians have emigrated to the United States?
5. On the average, engineers and architects are Canada's highest earners. What is their average annual income?

ANSWERS: 5. Their average income is $14,581 a year. 3. They constitute 38.3 percent of the total population. 1. Mrs. Stowe was the first woman authorized to practice medicine in Canada. 4. In 10 years emigration from Canada to U.S. has totalled 345,-000. 2. Officially, lieutenant-governors are named by the Governor-General; in fact, they are selected by the provincial governments.

Styled-to-slim PRINTED PATTERN

by Anne Adams

See how banding 'n' button detail extend this capelet to flatter your arms. The design is your favorite style—easy to don without hair-do muss.

Printed Pattern 4961: Half Sizes 14½, 16½, 18½, 20½, 22½, 24½. Size 16½ requires 2¾ yards 35-inch fabric.

Printed directions on each pattern part. Easiest, accurate.

Send fifty cents (50c) in coins (stamps cannot be accepted) for this pattern. Please print plainly. Size, name, address, style number and send to

Anne Adams Pattern Dept.
Department P.P.L.
60 Front Street, W., Toronto.

How To Hold FALSE TEETH More Firmly in Place

Do your false teeth annoy and embarrass by slipping, dropping or wobbling when you eat, laugh or talk? Just sprinkle a little FASTEETH on your plates. This alkaline (no-acid) powder holds false teeth more firmly so they feel more comfortable. Helps check "plate odor" (denture breath). Get FASTEETH today at any drug counter.

Attention

ANTELOPE HUNTERS

1960 SEASON—OCTOBER 24-29

1,850 Antelope Permits to be Issued.

1960 antelope license applications have been mailed to successful and unsuccessful applicants for 1958 antelope permits.

If you do not receive an application form by the 13th of August and want one, forward your request for an application to Fish and Wildlife Division, Natural Resources Building, Edmonton, Alberta. Do not send any money until advised.

Upon receipt of application you should:

1. Read instructions on card carefully.
2. Fill in information required, including your address (in two places).
3. Return the entire application in an envelope.
4. After September 5th all applicants will be notified as to whether they have been successful or unsuccessful in obtaining a permit.
5. The successful candidates should forward the license fee upon notification of their eligibility for an antelope license.

THE OLDER WORKER

The Minister of Labour several months ago circulated to employers a questionnaire regarding their experience with older workers. Now, we learn, the great majority of those replying agreed that in such matters as turnovers, learning ability, absenteeism and accidents, the older worker gets high marks; higher marks, in fact, in many cases, than younger employees.

This test of Canadian employer opinion confirms many earlier studies on this continent. On the strength of these there can be no doubt that a whole lot of preconceived notions on this subject are in need of drastic revision.

Among the comments made: Older men have *proven* their ability. They stay with the company for a longer period of time. They bring a good measure of maturity to the job. They account for fewer lost days than their junior counterparts. They have better judgment and are less likely to be diverted by wine, women and song. They are more persistent, less easily discouraged.

One manufacturer reported hiring four salesmen five years ago. Two of them turned in superlative results and are still with the company. They were both over 50. The two younger men were recently replaced—by older men. Today, 17 of the company's 28-man salesforce are over 50.

The company president had the following to say about his "senior" sales staff: "The customer reacts favourably to the dignity and reserve of older men, and often accords time and attention he would deny a younger, high-pressure salesman."

He continued: "Geriatrics experts tell us that men and women never grow old as long as they keep their sense of humour and active interest in others. It must follow then that being profitably employed rather than just sitting in a rocking chair, helps add years as well as happiness to life."

Clearly, the older worker, far from being a company liability, is more than likely to prove a first-class investment.

World Meat Production

A survey of meat production in 44 major countries showed that production in 1959 exceeded 100 billion pounds for the first time, reports the United States Department of Agriculture. The United States was by far the largest producer, accounting for more than one-quarter of the total production. Soviet Russia followed with about half of the U S production.

Removal of Dandelions

2,4-D is the selective herbicide recommended by Alberta's Supervisor of Horticulture P. D McCalla, for removal of dandelions from an established lawn. He stresses, however, that this spray should not be used on a windy day because the drift is harmful to other broad-leafed plants.

For best results, 2,4-D should be applied when both the grass and dandelions are in their most rapid stage of growth. Warm weather also facilitates a higher rate of absorption on the part of the weeds.

The amine and low volatile esters are recommended for lawn spraying because they are less likely to harm other broad-leafed plants. The war bar is popular with some people but factors such as walking speed and evenness of the ground affect the results. The walking cane does a good job in cases where the number of dandelion plants are limited.

Mr. McCalla warns that 2,4-D must always be used strictly according to the manufacturer's instructions. If these are not followed it is possible that the dandelions will survive the treatment or that the grass will be killed by the spray.

Winter Wheat

Research Station Weekly Letter
Lethbridge, Alberta
M. M. Grant, Cerealist

Many farmers in southern Alberta plan each year to seed a part of their acreage to winter wheat. Among the advantages associated with this crop the most important are the spreading out of the seeding and harvesting periods, soil erosion control during the winter months, and the greater yields usually gained from Winter wheat production. Among the disadvantages are the hazards of winterkilling and disease infection. Fortunately these hazards may be reduced greatly by using winter-hardy varieties and following approved cultural methods.

Kharkov 22 M.C. and Yogo are the two varieties of winter wheat recommended for southern Alberta. Kharkov 22 M.C. is the more winterhardy of the two, has stronger straw, and is the most widely grown variety at the present time. Yogo has given slightly higher yields when there has been no winter-killing and is more resistant to shattering and bunt (stinking smut). Both varieties are bearded and have acceptable winter wheat quality.

Date of seeding is particularly important in the control of wheat streak mosaic. Experiments at Lathbridge have shown that wheat sown in August is much more severely damaged by streak mosaic than that sown after September 1. Streak mosaic is a virus disease transmitted from plant to plant by a tiny mite. The main source of the mites and the virus is a diseased immature spring or winter wheat crop or volunteer wheat growing on summerfallow. Therefore, in addition to choosing the proper seeding date, it is important to destroy any infected volunteer wheat before seeding and to avoid seeding adjacent to an infected immature crop of spring or winter wheat. There is little danger involved in seeding beside a crop that is mature.

A new bulletin describing all phases of winter wheat production and problems is available free from the Lethbridge Research Station or the District Agriculturist.

Big blue cloud: Canadians in 1959 smoked 33,800,000,000 cigarettes.

RAPESEED AND MALTING BARLEY

Western Canada is expected to harvest a large rapeseed crop this year. Our elevators are equipped to handle rapeseed and your nearest Searle agent will be pleased to give you full particulars upon request as well as to supply you with a copy of our recently revised pamphlet on "Rapeseed" which deals with harvesting and threshing procedures.

In many districts malting barley continues to be an important cash crop. If you will have malting barley to deliver this year be sure to see our agent who will be happy to assist you with your marketing problems.

A General Motors Value

Model Illustrated — Impala 4-Door Sedan (whitewall tires optional at extra cost)

get a lot more car for a lot less money

Body by Fisher

The symbol of unmatched quality . . . proof of Chevrolet's renowned attention to detail promising a longer, trouble-free life for your car. Chevrolet brings you this hallmark of engineering perfection in every model.

FULL COIL SUSPENSION

It's the most exciting advance that ever came between you and the road. Each spring soaks up bumps with a smoother, quieter telescopic action providing a ride undreamed of with the leaf springs you got on many other cars.

CHOICE OF 6 OR V8

Choose thrift in the Hi-Thrift 6 or Economy V8! Or go for any degree of power you want with your choice of Chevrolet's super-efficient V8's. Remember, Chevrolet gives you a wide selection of unbeatable power teams.

SAFETY-GIRDER FRAME

Here's where Chevrolet's superlative roadholding talents start. This extra rigid design gives you a firm-footed grip of the road. And the durability of the X-built frame is just another measure of Chevrolet safety for you.

MAGIC MIRROR FINISH

Magic-Mirror finish keeps your Chevrolet new-car brilliant years longer. And underneath there's multi-stage rustproofing that helps lock corrosion out. Two more reasons why so many people are taking a shine to Chevrolet.

Safety-Master Brakes

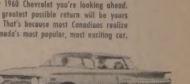
It's safety first with Chevrolet all the time. These big Safety-Master brakes are air-cooled for fade-free stopping power. And Chevy's extra large bonded linings last longer . . . another measure of economy for you.

UNBEATABLE COMFORT

Here's real stretch out roominess for six big people. And there's inches more entrance room . . . no more awkward clambering. Yes, in the driver's seat of your Chevrolet, there's foam cushioning under you and pure pleasure ahead.

HIGH RESALE VALUE

When you buy your 1960 Chevrolet you're looking ahead. You know that the greatest possible return will be yours come trade-in time. That's because most Canadians realize that Chevrolet is Canada's most popular, most exciting car.



Chevrolet

C-2360C

Add up the advantages of owning a Chevrolet . . . and you'll realize you're actually getting a lot more car than you've ever had before!
